

To install **Downloader** on your **NVIDIA Shield TV**, follow these steps:

1. Enable "Unknown Sources" (Allow installation from third-party apps):

- **Go to Settings** on your NVIDIA Shield.
- Select **Security & Restrictions** under the "Device Preferences" section.
- Turn on the option for **Install unknown apps**.
- Choose the browser or app you'll use to download the APK (like Chrome or Downloader), and toggle it to allow installations.

2. Install Downloader via the Google Play Store:

- Open the **Google Play Store** on your NVIDIA Shield.
- Use the search bar to search for **Downloader**.
- Select the **Downloader** app by AFTVnews.
- Click **Install**.

3. Install Downloader Manually via APK (Alternative Method):

If you cannot find **Downloader** in the Google Play Store or prefer to sideload the app, you can install it manually by using an APK:

- **Step 1:** Download the **Downloader APK** to your computer or directly on the NVIDIA Shield using a browser (e.g., Chrome).
- **Step 2:** Transfer the APK to the **NVIDIA Shield** via USB drive or use a cloud storage service.
- **Step 3:** Open the **File Manager** app on the NVIDIA Shield, navigate to the location where the APK is saved, and select it to begin installation.

4. Open and Use Downloader:

- Once installed, launch **Downloader** from your apps list on the NVIDIA Shield.
- You can now use it to download APKs or browse websites to install other apps onto your device.

That's it! You have successfully installed the **Downloader** app on your NVIDIA Shield TV. You can now use it to install additional apps, including APKs for IPTV or other third-party applications.
